

Neuvoo Integration Documentation

Introduction of Integration

This documentation is all about neuvo integration. In this job will be pushed to a URL on the bases of team assign. For every Indent team assign will be option in the application, where recruiter will assign the indent as Neuvo. This jobs will be flown to URL using windows service.

Content of the Integration

1. Job Pushing
2. Scripts for Job pushing

1. Job Posting

- Service will pick the job which are assigned as a Neuvo
- Service will push the data to the URL
- After pushing one flag is updated, that confirm that the job is pushed to URL.
- On job status updation the job is again pushed to the URL

Flags

Table_Name	Field_Name	Before_Pushing	After_Pushing
HC_REQUISITIONS	IsPushToNeuvo	0	1
HC_REQUISITIONS	NeuvoResponseJson	null	ResponseJson

2. DB Script

Description	Table_Name	Fields/SP	Execute Statement/FileName
This Flag is used to check whether the Job is pushed to URL	HC_REQUISITIONS	IsPushToNeuvoo	<pre> IF not EXISTS(SELECT * FROM INFORMATION_SCHEMA.COLUMNS WHERE TABLE_NAME = 'HC_requisitions' AND COLUMN_NAME = 'IsPushToNeuvoo') begin alter table hc_requisitions add IsPushToNeuvoo bit end </pre>
This Field is used to keep the response Json after Job pushing	HC_REQUISITIONS	NeuvooResponseJson	<pre> IF not EXISTS(SELECT * FROM INFORMATION_SCHEMA.COLUMNS WHERE TABLE_NAME = 'HC_requisitions' AND COLUMN_NAME = 'NeuvooResponseJson') begin alter table hc_requisitions add NeuvooResponseJson nvarchar(max) end </pre>
SP for picking the job at once		usp_getNeuvooJobs	Dbo.usp_getNeuvooJobs.StoredProcedure
SP for updating the Flag after pushing		usp_updateBaytFlag	Dbo.usp_updateBaytFlag.StoredProcedure Note: Please follow the guideline in SP
